

```

using System;
namespace MyApp
{
    abstract class Info
    {
        public void Welcome()
        {
            Console.WriteLine("Welcome to C# class");
        }
        public string CourseName = "PROG 123";
        public abstract void GetDetails (string x, string y);
    }

    class User: Info
    {
        public override void GetDetails (string a, string b)
        {
            Welcome();
            Console.WriteLine("Name: {0}", a);
            Console.WriteLine("Location: {0}", b);
            Console.WriteLine("Course Name: {0}", CourseName);
        }
    }

    class Program
    {
        static void Main(string[] args)
        {
            User u = new User();
            Console.WriteLine(in here "Abstract Class Example here");
            Console.WriteLine("enter your name");
            string n = Console.ReadLine();
            Console.WriteLine("enter your location");
            string L = Console.ReadLine();
            u.GetDetails(n,L);
        }
    }
}

```
